DATA SHARING
REDCap and the NIH Data Archive (NDA)

The National Institutes of Health (NIH) Data Management and Sharing (DMS) Policy - mandating the submission of data management plans (DMSPs) with grant proposals and the sharing of the project's scientific data - went into effect on January 25, 2023. This policy applies to all research, that is funded or conducted in whole or in part by the NIH, and results in the generation of scientific data.

So what does that mean if the research project you're working on has a data sharing and archiving requirement? To answer that question and address the process of meeting the requirement, and to review the best practices for handling your human subjects data in REDCap for the purpose of reporting research data, please see: Using REDCap for NIH Data Archive and Guidance for Preparing REDCap Data for NIMH Data Archive Submission. For more information: REDCap & NIH Data Sharing.

Academic IT Services (AITS) is offering a virtual training session on the DMPTool, a free, open-source, online application that provides a click-through wizard for creating a DMSP that complies with funder requirements. The class will also introduce research associates to the AITS DMS Website and provide guidance for navigating the plethora of on-line resources associated with data management. Classes will be held monthly: Register for a future session. For more information, contact: Academic IT Services at aits@uchc.edu.
