

# Attention!

## PPE requirements when providing direct patient care to NON-COVID, NON-Rule Out patients

Procedure Mask

Face Shield/Eye Protection

- Please note the use of the shield is a key component to enhance protection to prevent exposures. **It is essential that the shield be worn consistently throughout the shift. This includes time spent in the unit outside of the patient room.**
- Many of the exposures to staff have occurred when taking breaks while eating and drinking because of the necessity of removing the mask and shield. **It is essential that the area is limited to only the number of people that can remain a safe distance of 6 feet apart at all times while masks and shields are removed.**
