

The Neuroscience Graduate Program at the University of Connecticut School of Medicine is an interdisciplinary and inter-departmental program with over 30 faculty members. Research in this program is aimed at understanding the development, organization, function, and dysfunction of the nervous system at the molecular, cellular, physiological and systems levels.

Program Director: Stephen Crocker, Ph.D.
crocker@uchc.edu

Associate Director: Eric Levine, Ph.D.
eslevine@uchc.edu

Assistant Director: Yulan Xiong, Ph.D.
yxiong@uchc.edu

Faculty research interests include:

- Development of neural tissue
- Synaptic integration and plasticity
- Organization of sensory systems
- Injury repair in the visual system
- Regeneration and transplantation
- Neurobiology of disease
- Glial-neuronal interactions
- Human iPS cell models of disease
