

# Neuroscience Graduate Program

The Neuroscience Graduate Program at the **University of Connecticut School of Medicine** is an interdisciplinary and inter-departmental program with over 30 faculty members. Research in this program is aimed at understanding the development, organization, function, and dysfunction of the nervous system at the molecular, cellular, systems and whole animal levels.

## Faculty research interests include:

- Development of neural tissue
- Synaptic integration and plasticity
- Organization of sensory systems
- Neuronal circuits and systems
- Regeneration and transplantation
- Neurobiology of diseases
- Glial-neuronal interactions
- Human stem cell models of diseases
