

# ProAir™ RespiClick™ Inhaler (Albuterol sulfate 90mcg)

This guide will teach you how to use your inhaler.

## Follow these steps before you use your inhaler for the first time:

1. Take your RespiClick inhaler out of the box, and remove it from the foil package. The inhaler expires in 13 months from when you remove from the foil package, once you take all 200 doses and/or when expiration date is reached (whichever comes first).
2. Identify all of the parts that are labeled in the picture below.

3. Locate the dose counter on the backside of your inhaler. There are 200-metered doses; it should now say 200. Each use of the inhaler will decrease the number by one, until there are no doses of your medication list. The dose counter only counts by even numbers.

Device Full  
200 Doses

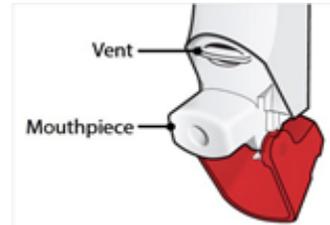

Device Empty  
0 Doses

## When you are ready to take a dose, please follow these instructions:

1. Make sure that the counter does not say "0". If it does, your inhaler is empty. Throw it away and get a new one.
2. Make sure the red cap is closed. Opening the cap is the only way that your inhaler is activated.

3. Hold the body of the inhaler in one hand, making sure that the mouthpiece points downward and the top of the inhaler points upward. Pull the cap down with the other hand, until you hear a “click”. This “click” ensures that the RespiClick is activated and ready for use. If you do not hear a click, then you will receive little to none of your medication.
4. Breathe out releasing as much air from your lungs as you can. Never blow out into the inhaler.
5. Place the mouthpiece to your mouth. Cover the entire mouthpiece opening, with your lips sealed around the edges. Do not cover the vent as pictured.

6. Breathe in deeply as this will deliver the medication to your lungs.
7. Take the inhaler out of your mouth.
8. Hold your breath for 5-10 seconds.
9. Breathe out, away from the inhaler mouthpiece.
10. If you need another dose now, wait a minute then repeat steps
11. Snap the cap back onto the mouthpiece.

### **Important Notes:**

- You do not need to clean your inhaler. If you wish to clean it, wipe the outside of the mouthpiece with a dry tissue.
- Never get your inhaler wet. Store your inhaler in a cool, dry, and dark place, such as a drawer in your bedroom or kitchen; do NOT store your inhaler in the bathroom. Keep away from children and pets. Do NOT share your inhaler with anyone.
