

Faculty Cluster Hire in Genomics / Genome Biology

We are hiring three Assistant Professors in the area of Genomics or Genome Biology in the Department of Molecular Biosciences.

We are seeking applications from researchers working in any area of genome biology in any system, who use experimental, quantitative and/or computational approaches to address fundamental biological questions, and who will build on current strengths in the department. With these hires we seek to enhance both genome science research and genomics education and training at KU.

About Us

KU is a major educational and research institution located in Lawrence, a vibrant, thriving community of more than 90,000 a short drive from Kansas City. Our [department](#) provides a highly interactive research environment that includes successful researchers in a range of fields. The successful candidates would also be integrated into the [KU Center for Genomics](#), a multidisciplinary center coalescing the strengths in genomics across several groups/departments at KU.

Requirements

Required qualifications include a PhD and postdoctoral experience in genomics (or related disciplines), potential for excellence in research, and a commitment to life sciences education.

To Apply

To apply online go to <http://www.employment.ku.edu/academic/26379BR>. Initial review of applications begins November 15, 2023 and will continue as long as required.

Informal inquiries can be directed to the Chair of the search committee, Stuart Macdonald (sjmac@ku.edu).
