

Abstract

Immunotherapy:

- Aim: help CD8+ T-cell fight cancer
- 1st Activation: T-cell Receptor (TCR)
- 2nd Activation: costimulatory receptor (CD28)
- Intercellular protein signaling pathways
- Proteins Akt and PLC-g responsible for expression of main proliferation gene IL-2

Stopping Signals⁵:

- Inhibitory Receptors(CTLA-4, PD-1) block signals
- Immunotherapy introduces drugs that block these inhibitory receptors

Our Goal⁴:

- Model the major signaling proteins in the T-cell
- Simulate using different initial conditions
- Provide a way to investigate how a T-cell responds to immunotherapy drugs

Methods

Create Model using BioNetGen⁵

```
begin molecule types
pMHC (b_TCR)
TCR (V, ITAM-U-P)
end molecule types
```

Input:
 2 molecule types
 2 seed species
 2 reaction rules

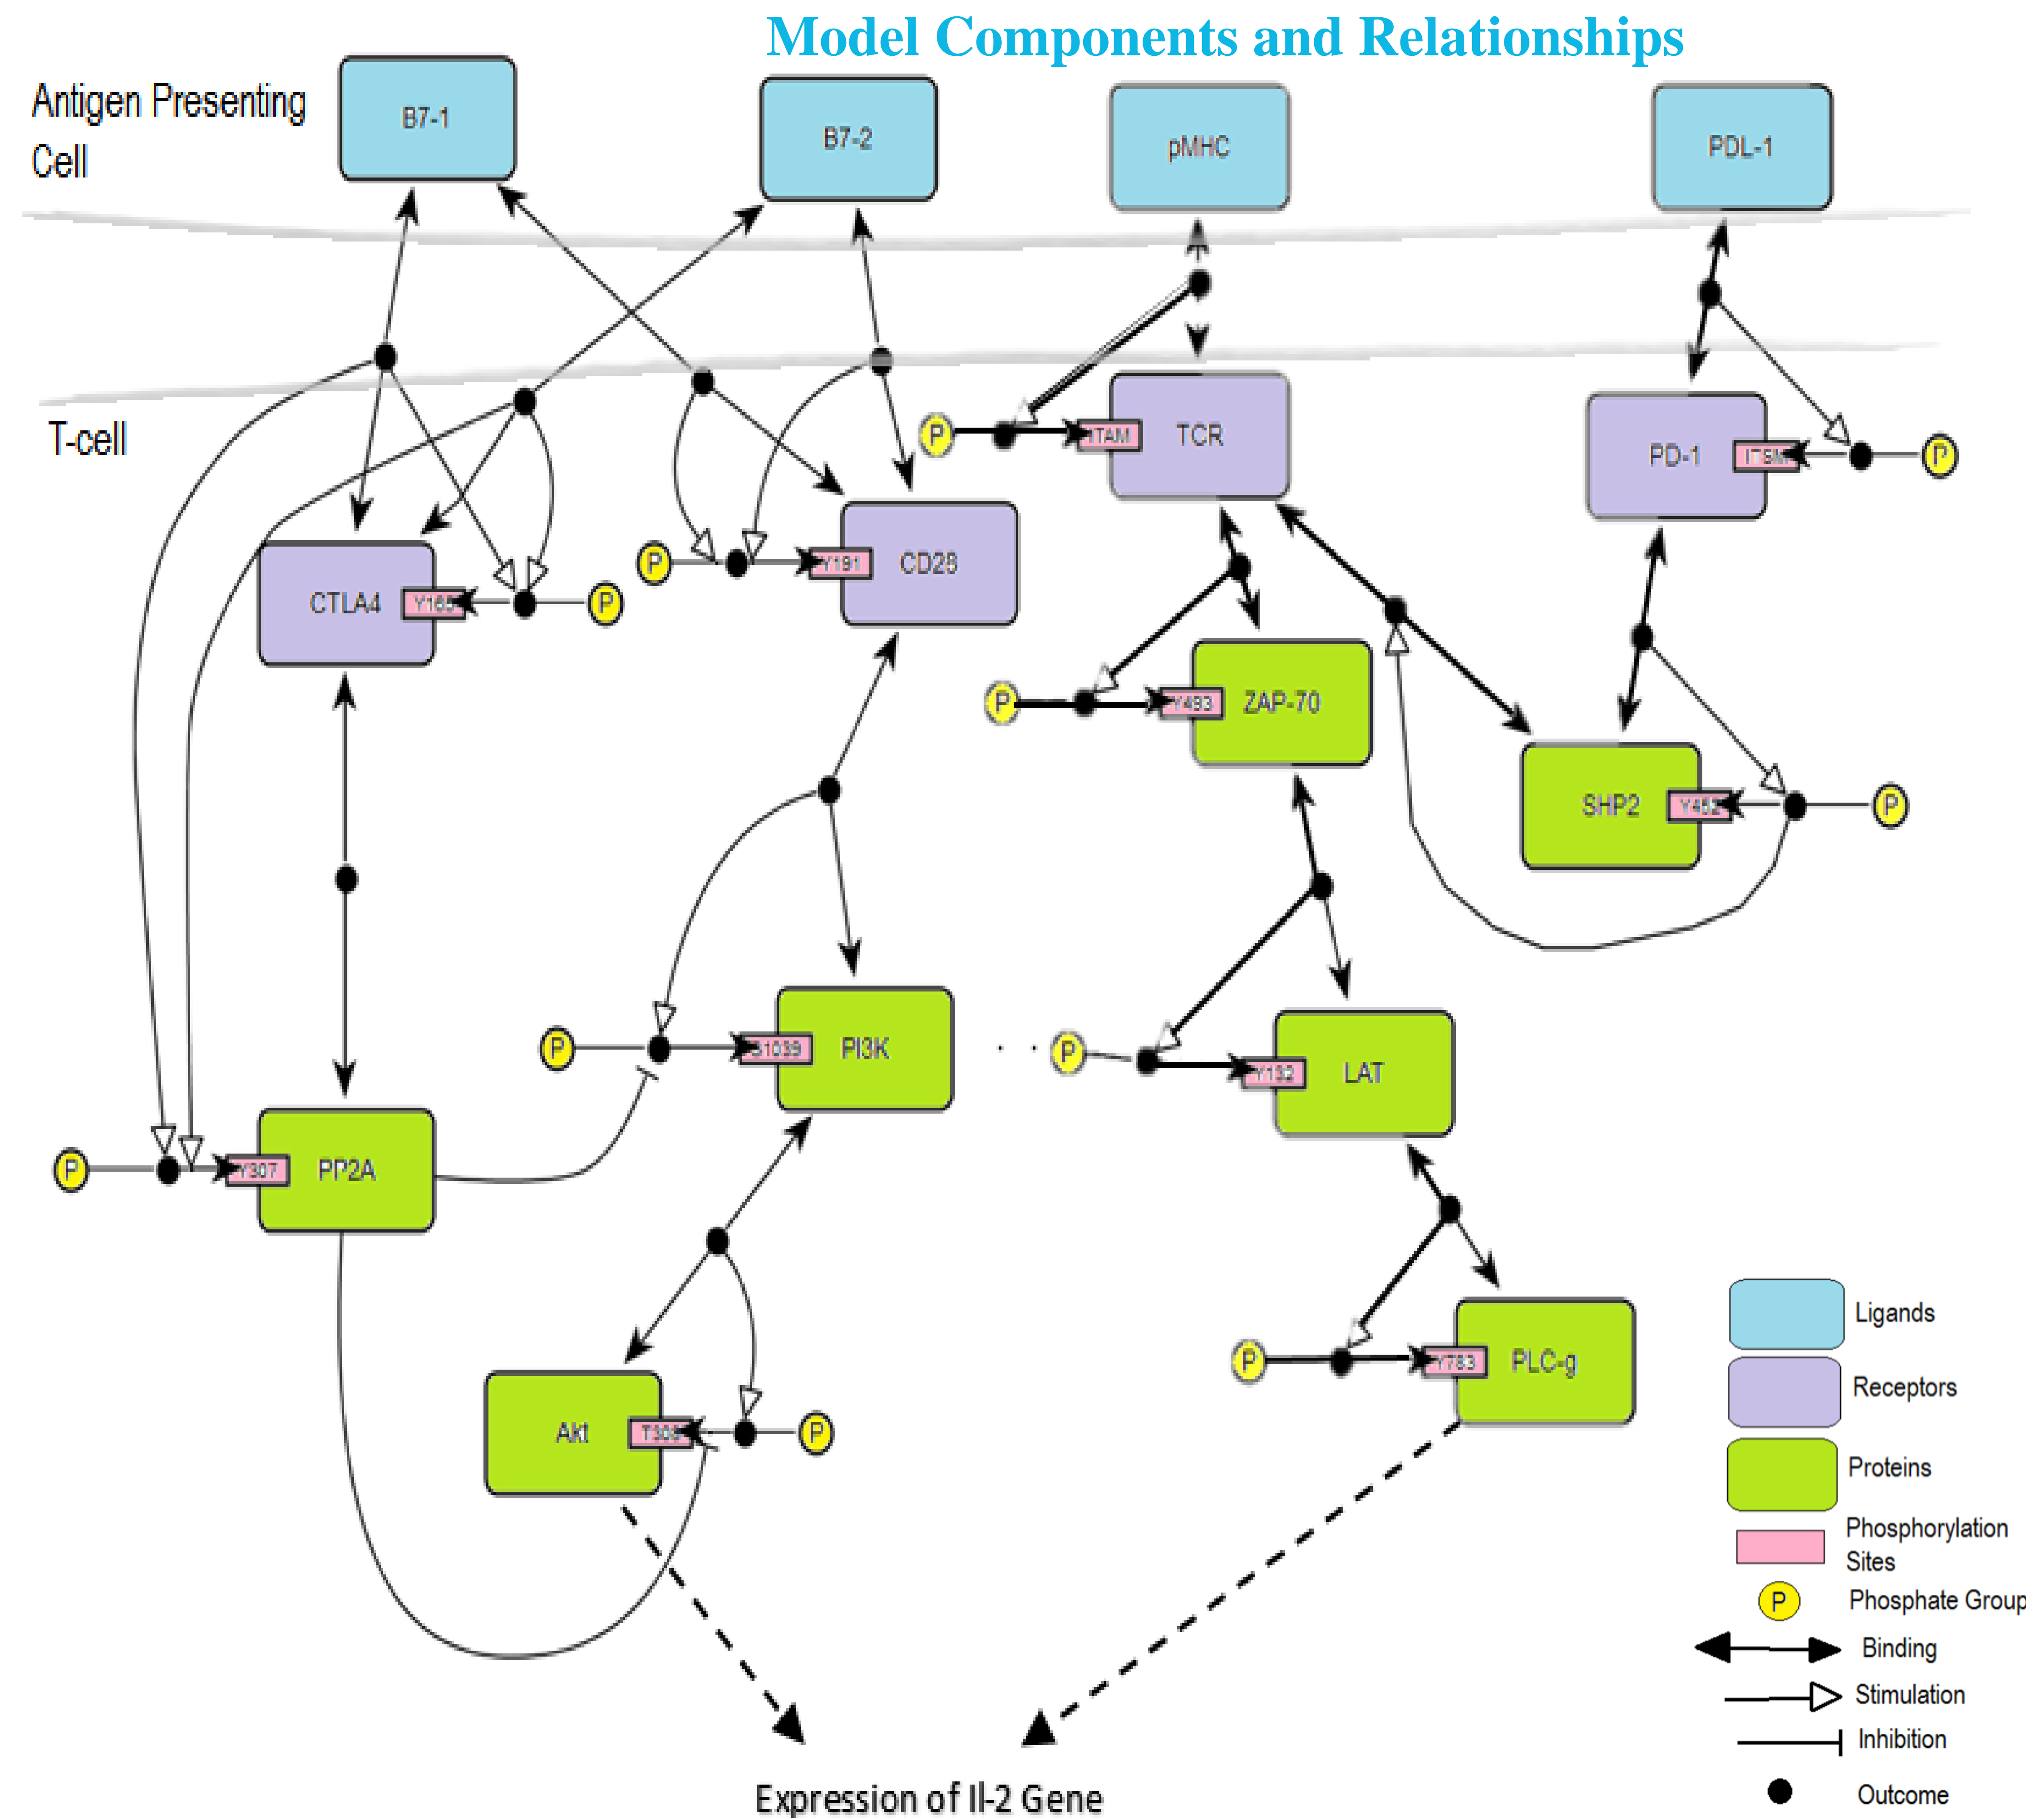

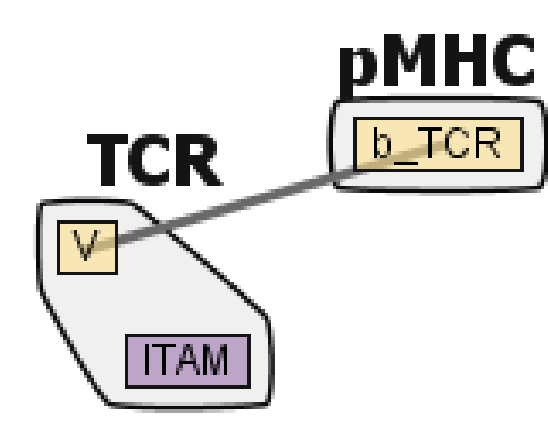

```
begin seed species
pMHC (b_TCR) @Tcell_PM
TCR (V, ITAM-U) @Tcell_PM
end seed species
```

Output:
 5 possible species
 5 different reactions
 Contact Map

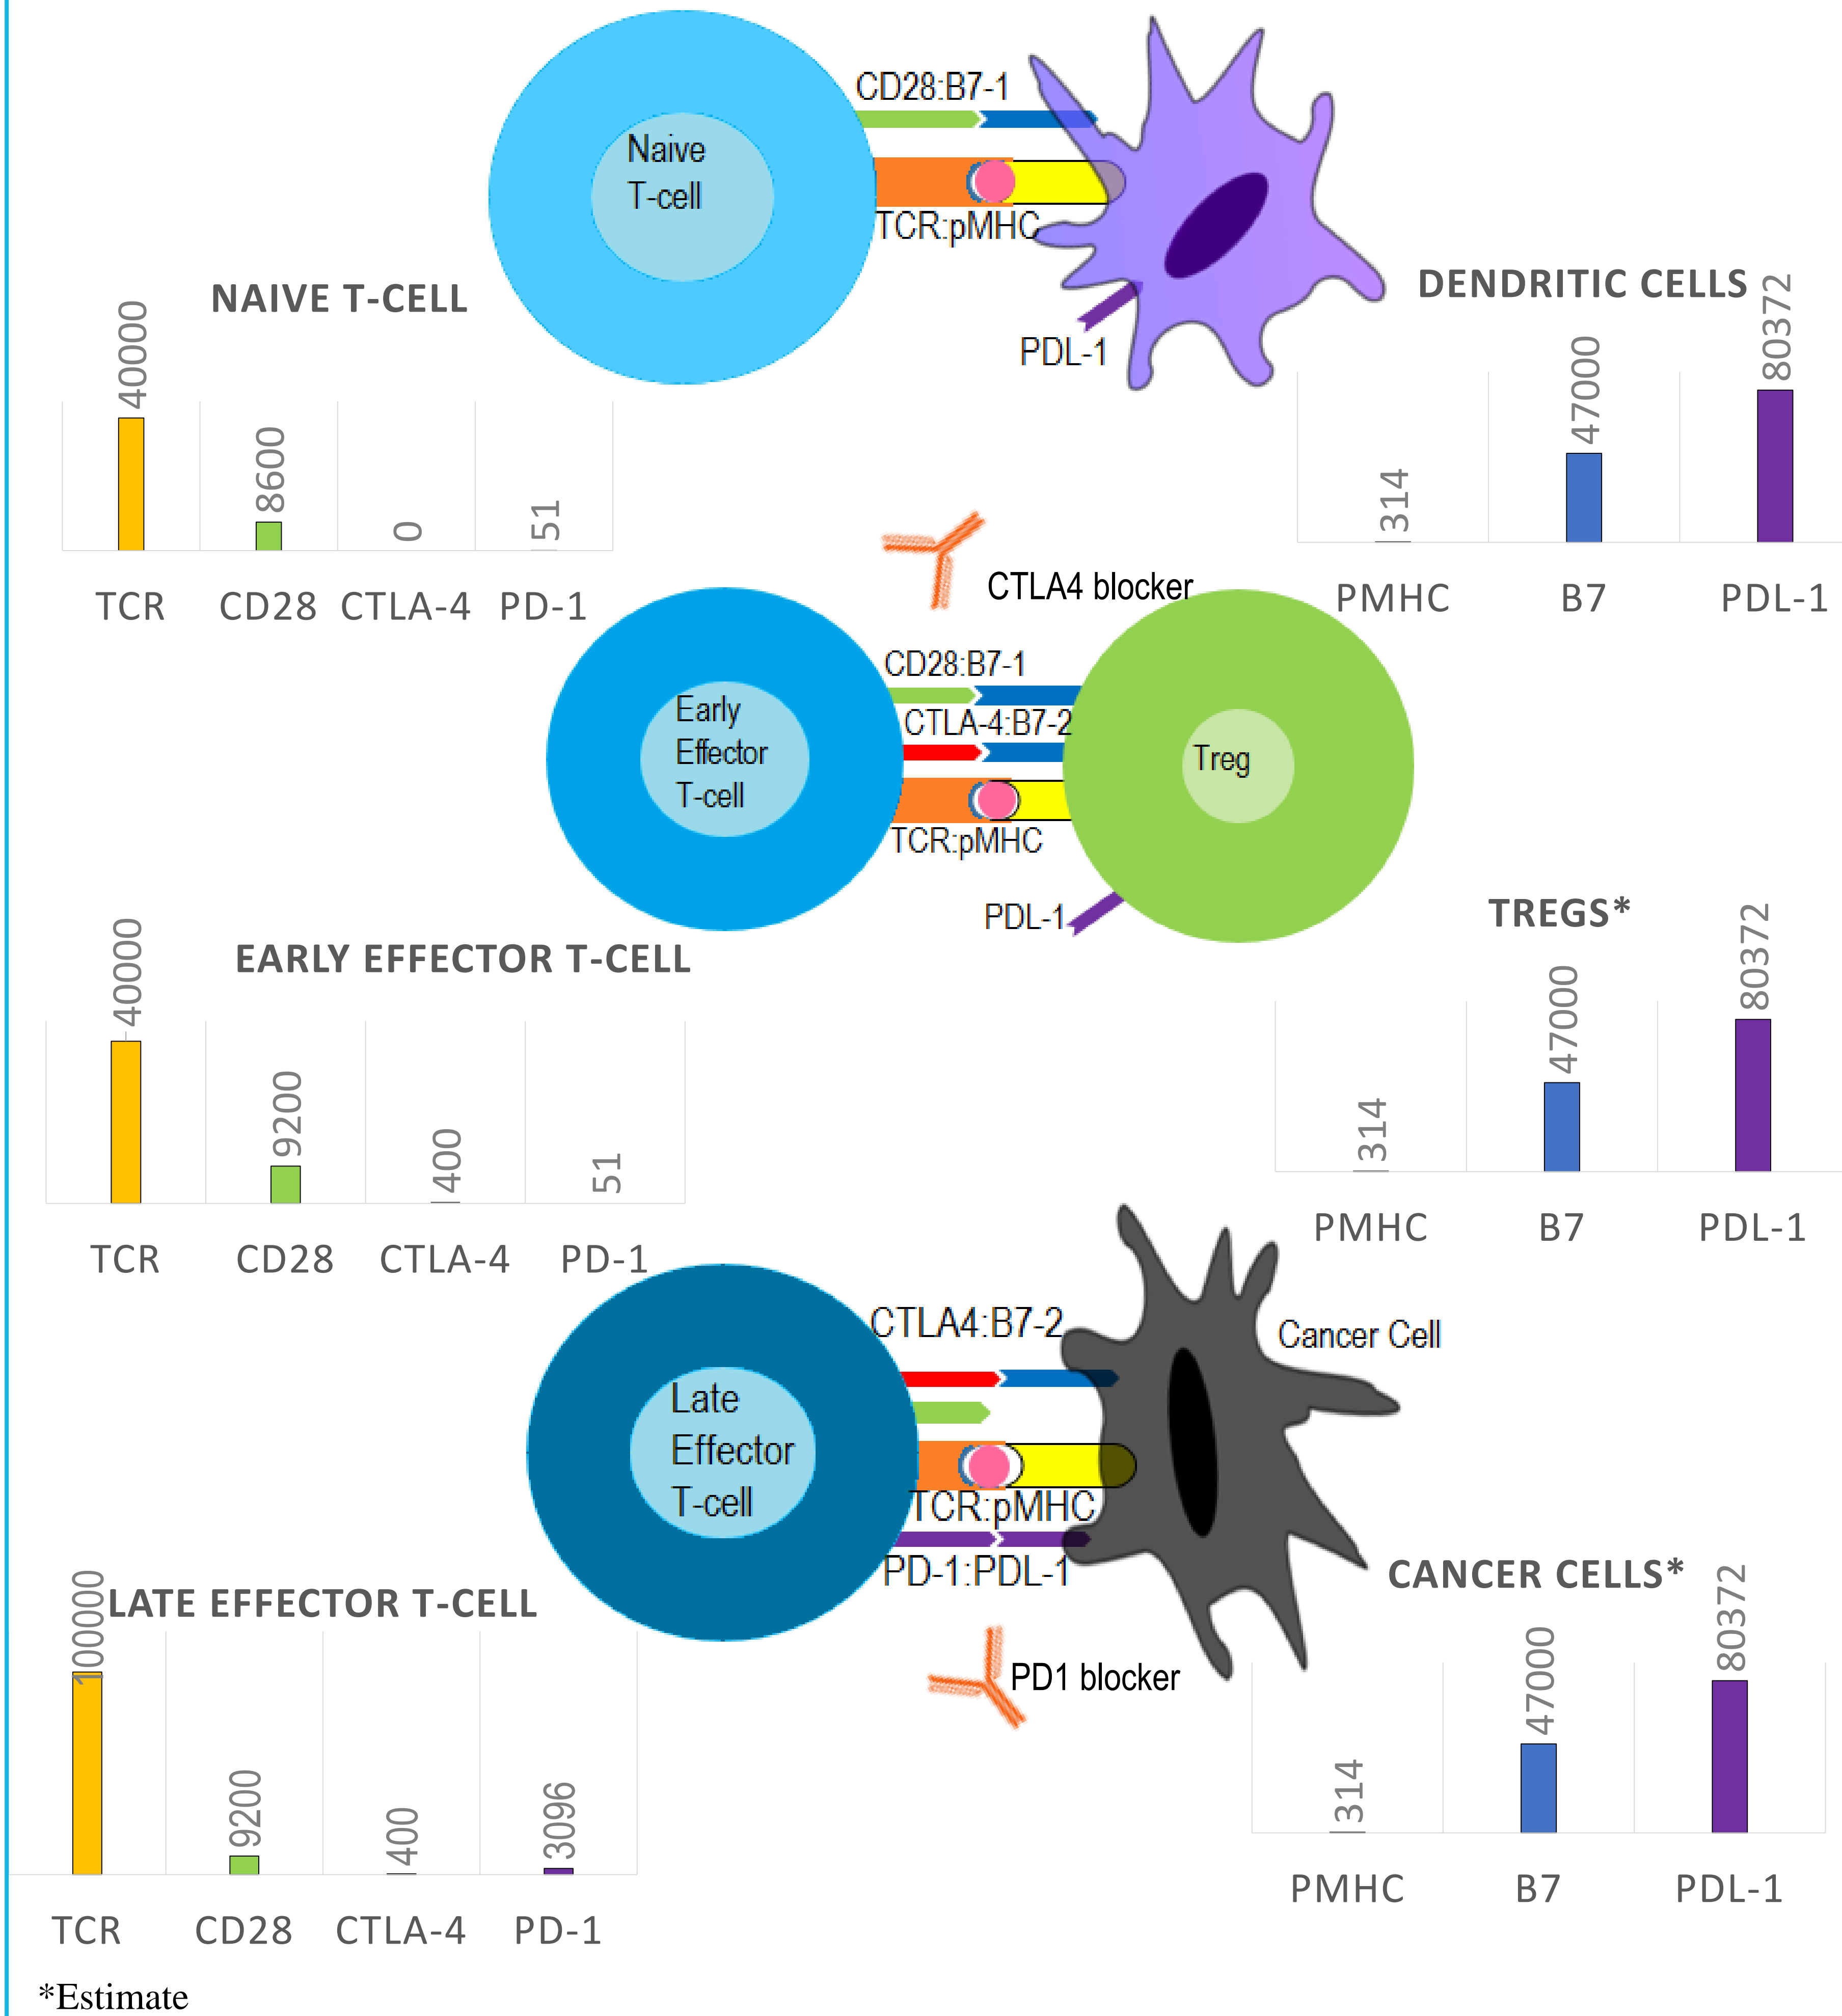

```
begin reaction rules
Rule1: pMHC (b_TCR) + TCR (V) <->
      pMHC (b_TCR!1) . TCR (V!1) pMHC_on, pMHC_off
```

```
Rule2: pMHC (b_TCR!1) . TCR (V!1, ITAM-U) ->
      pMHC (b_TCR!1) . TCR (V!1, ITAM-P) Lck_phos
```

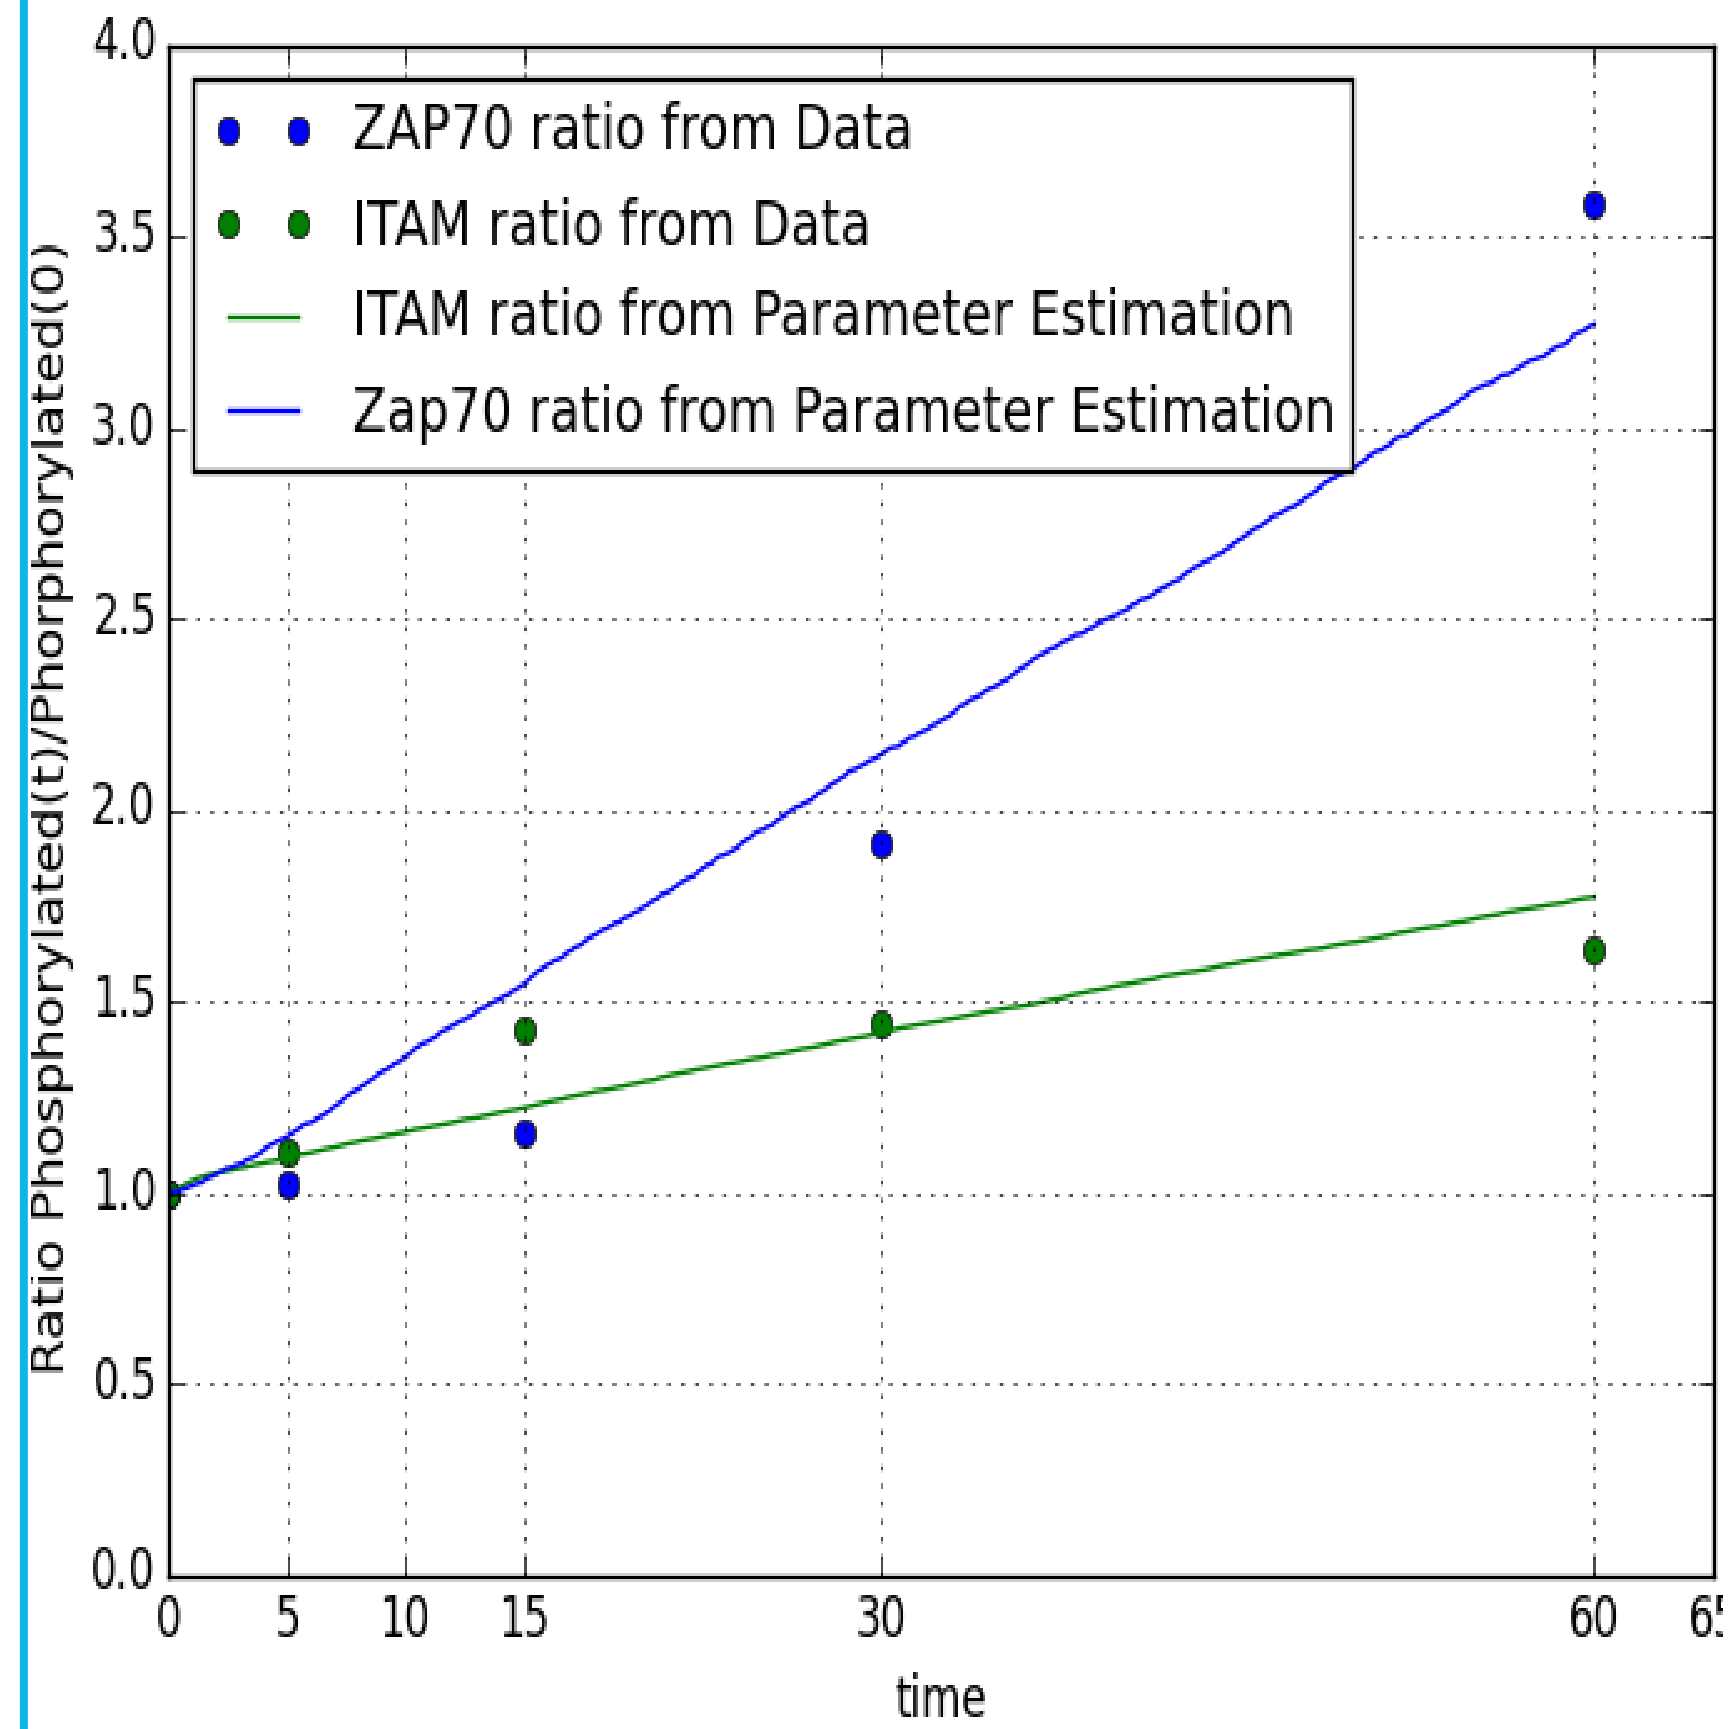

Run Parameter Estimation and Simulation with Copasi²

Various Simulation Initial Conditions

Parameter Estimation

For Parameter Estimation, we fit our model to phosphoproteomics data.¹ Data given in phosphorylation at time t over phosphorylation at initial time (error bars excluded)

Expression of IL-2 Gene

IL-2 Expression Conditions:

- PLCg only → IL-2 expression
- PLCg and Akt → IL-2 expression
- Akt only → no IL-2 expression

Tested Formulas:

$$f : \mathbb{R}^2 \rightarrow \mathbb{R}$$

$$f(\text{Akt}, \text{PLC}\gamma) = \alpha \cdot \text{PLC}\gamma + \beta \cdot \text{PLC}\gamma \cdot \text{Akt}$$

$$f(\text{Akt}, \text{PLC}\gamma) = \alpha \frac{\text{Akt}^n}{\text{Akt}^n + k_{D,\text{Akt}}} \frac{\text{PLC}\gamma^n}{\text{PLC}\gamma^n + k_{D,\text{PLC}\gamma}}$$

Data⁶:

Female Mice T-cells were stimulated at different initial conditions and IL-2 levels were evaluated using an ELISA kit.

Initial Conditions	molecules of IL-2/cell after 48 hr
nothing	0
TCR activation	111622
TCR activation and CTLA4	38799
TCR and CD28 activation	1589277
TCR and CD28 activation and CTLA4	559605
