What do your scores mean?

Low: You are at low risk of health and other problems from your current pattern of use.
Moderate: You are at risk of health and other problems from your current pattern of substance use.
High: You are at high risk of experiencing severe problems (health, social, financial, legal, relationship) as a result of your current pattern of use and are likely to be dependent.

Scoring the ASSIST

Substance Specific Scores.

Sum across questions 2 – 7 for each drug category, separately.

For example, the marijuana use score would be: 2c+3c+4c+5c+6c+7c

Maximum score for tobacco = 31

Maximum score for each of the other categories = 39

Interpretation of Scores:

Low Risk (Provide education, feedback, treatment as usual)

While these patients may use substances occasionally, they are not currently experiencing any problems related to their use and are at low risk of developing health or other problems related to their use in the future.

Moderate Risk (Provide Brief Intervention, take-home materials, Brief Treatment for those scoring at the high end [>19] of moderate risk)

Patients are at moderate risk of health and other problems and may be experiencing some of these problems now. Continuing use in this way indicates a likelihood of future health and other problems, including the possibility of dependence.

Risk is increased for those with a past history of substance problems and dependence.

High Risk (Conduct further assessment and referral to specialist drug &/or alcohol treatment service, use Brief Intervention as referral tool)

These patients are experiencing severe health and other problems and are most likely dependent on the substance(s).
